Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

hydrogenase (EC 1.18.99.1) small chain precursor - Azotobacter vinelandii
N.Alternate names: hydrogenlyase; [NiFe]hydrogenase
C.Species: Azotobacter vinelandii
C.Species: Azotobacter vinelandii
C.Saccession: J00805
R.Menon, A.L.; Stults, L.W.; Robson, R.L.; Mortenson, L.E.
Gene 96, 67-74, 1990
A:Title: Cloning, sequencing and characterization of the [NiFe]hydrogenase-encoding s A:Reference number: J00805; MUID:91092503; PMID:2265761
A:Accession: J00805
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        A pathway: hydrogen metabolism
A;Note: contains iron-sulfur and nickel
A;Note: contains iron-sulfur and nickel
C;Superfamily: hydrogenase (NiFe) small chain
C;Superfamily: hydrogenase (NiFe) small chain
C;Keywords: 3Fe-45; 4Fe-45; heterodimer; hydrogen metabolism; iron-sulfur protein; me
F;1-45/Domain: signal sequence #status predicted <SIG>
F;1-45/Domain: signal sequence #status predicted <SIG>

"ILI-17s adopt a cystine knot fold: structure and activity of a novel cytokine, IL-17F, and implications for receptor binding.";
EMBO J. 20:5332-5341(2001).
                                                                                                               "IL-17\tilde{r}, a novel cytokine selectively expressed in activated T cells and monocytes, regulates anglogenesis and endothelial cell cytokine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                             -i- FUNCTION: Stimulates the production of other cytokines such as 6, IL-8 and granulocyte colony-stimulating factor, and can regulate cartilage matrix turnover. Stimulates PBMC and T-cell proliferation. Inhibits angiogenesis.

"Molecular characterization of the family of the N-methyl-D-aspartate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                -1- TISSUE SPECIFICITY: EXPRESSED IN BRAIN, MAINLY IN THE SUBCORTICAL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            -!- DEVELOPMENTAL STAGE: Already detected in embryonic stages, peaks at postnatal day 7, and decreases thereafter to adult levels.
-!- SIMILARITY: BELONGS TO THE LIGAND-GATED IONIC CHANNEL FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Boulter J., Pecht G.;
Submitted (MAR-1994) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: NMDA RECEPTOR SUBTYPE OF GLUTAMATE-GATED ION CHANNELS
WITH HIGH CALCIUM PEREBABLITY AND VOLFAGE-DEFENDENT
SENSITIVITY TO MAGNESIUM. MEDIATED BY GLYCINE.
-!- SUBUNIT: HETRERODIMER OF AN EFSILON SUBUNIT AND A ZETA SUBUNIT.
-!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- ALTERNATIVE PRODUCTS: 2 ISOFORMS; 1 AND 2 (SHOWN HERE); MAY BE
PRODUCED BY ALTERNATIVE SPLICING.
                                                                   FROM N.A. (ISOFORM 1), AND SEQUENCE OF 1265-1356 FROM N.A.

Patent No. 6380362

GENERAL INFORMATION:
APPLICANT: Watson, James D
APPLICANT: Watson, James G
TITLE OF INVENTION: Polynucleotides polypeptides expressed
TITLE OF INVENTION: Dy the polynucleotides and methods for their use.
FILE REFERENCE: 11000.105011
CURRENT APPLICATION NUMBER: US/09/724,864
CURRENT FILICAG DATE: 2000-11-28
PRIOR APPLICATION NUMBER: US. No. 6380362 60/171,678
